TITLE : DOUBLE SIDE-ADHESIVE TAPE

**ABSTRACT :** PURPOSE: To subject a silicone raw material to a sufficiently strong adhesive treatment by an adhesive tape style giving a uniform coating film thickness and a stable adhering force, capable of avoiding troubles comprising the protrusion of an adhesive agent and of preventing the adherends from being stained, immediately expressing the adhesive force, permitting to advance a work to the next work without requiring a waiting time, thereby allowing to efficiently advance the work and not requiring a counter-measure for the environmental hygiene for each adhering site.

**CONSTITUTION:** The double side-adhesive tape is characterized in that at least one of adhesive layers (2) disposed on both the sides of a support (1) comprises a silicone adhesive agent and in that a separator (3) treated with a release agent comprising a polymer having fluorine-containing side chains in its siloxane skeleton is temporarily adhered to the adhesive layers. The double side-adhesive tape excellent in the peelability of the separator from the silicone adhesive layer and excellent in the adhesive force-maintaining property of the adhesive layer after the peeling is obtained.
